Application/Control Number: 09/693,079

Art Unit: 1775

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 2. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Chan et al (5,917,226).

The rejection is maintained for reason of record in paper sent 12-30-02.

Applicant's arguments filed 3-2004 have been fully considered but they are not persuasive. The applicant argues that the claimed element is not the same as the reference. The examiner does not agree. In claim 4 of the reference, Chan et al explicitly discloses the claimed chemical components, and the rejection stands.

3. Claims 7,9 are rejected under 35 U.S.C. 102(e) as being anticipated by Carr (6,130,464).

The rejection is maintained for reason of record in paper sent 12-30-02.

Applicant's arguments filed 3-2004 have been fully considered but they are not persuasive. The applicant argues that the disclosed element of the reference is a switch and not responsive to thermal energy. The examiner disagrees. The applicant even explicitly states that the element responses to thermal energy

Application/Control Number: 09/693,079

Art Unit: 1775

and thus the rejection stands. The applicant's attention is directed to column 6, line 38, where the reference explicitly discloses the claimed metal compound.

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 5, 7, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al ("Testing and Characterization....Analysis') and Ozaki et al (5,409,762). The rejection is maintained for reason of record in paper sent 12-30-02. Applicant's arguments filed 3-2004 have been fully considered but they are not persuasive. The applicant is reminded that The applicant is reminded that one cannot show non-obviousness by attacking the references individually where the rejection is based on the combination of references (In re Young, 159 USPQ 725 (CCPA 1968)). The test for combining references is what the combination of disclosures taken as a whole would suggest to one of ordinary skill in the art (In re Simon, 174 USPQ 114 (CCPA 1972)). Yang et al discloses that metal nitrides are known to be used in an actuator and Ozaki et al specifically describes the grouping of metal compounds used in electrical materials. This grouping

disclosed by Ozaki et al included equivalents of nitrides to borides, silicides and

Application/Control Number: 09/693,079 Page 4

Art Unit: 1775

carbides, and titanium to the other transitional metals and thus the rejection stands.

- 6. The applicant is reminded that it is elementary that the mere recitation of a newly discovered function or property, inherently possessed by things in the prior art, does not cause a claim drawn to distinguish over the prior art. Additionally, where the Patent Office has reason to believe that the functional limitation asserted to be critical for establish novelty in the claimed subject matter may, in fact, be an inherent characteristic of the prior art, it possesses the authority to require the applicant to0 prove that the subject matter shown to be in the prior art does not possess the characteristic relied on. (In re Swinehart, 169 USPQ 226 (CCPA 1971)). The properties exerted inn the claims are inherent in the claimed metal compounds disclosed.
- 7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1775

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Archene Turner whose new telephone number is (571) 272-1545. The examiner can normally be reached on Monday through Wednesday, and Friday from 10:30 am. to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571) 272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Please remember to include on the fax, the art unit 1775, serial number and Examiner's name.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
